

erlab

You can breathe.

Our laboratory analyzes interactions between molecules and validates the right filtration technology for your applications.

Based on this scientific analysis, our laboratory will recommend the right filtration configuration and the type of enclosure needed to ensure your safety.

After a captair enclosure has been installed, your ESP specialist will provide at no extra cost, long term monitoring and reconfiguration services for your Captair system based on the applications carried out within the hood.

ESP Erlab Safety Program - our commitment to your safety

eValiQuest

Smart risk
assessment study

eValiQuest is a new chemical assessment service designed to identify the most appropriate chemical filtration fume hood for your safety. This new and improved digital tool has been ergonomically redesigned from the ground-up to be easier and simpler to use while providing extended safety protocols for evaluating chemical risks associated with your chemical handlings. Upon successful completion of your chemical analysis a suitably configured filtering fumehood will be recommended for your relevant activity. Our team of chemical experts will then finalize and certify the best solution for optimal filter life with your filtration fume hood and for your protection.

eGuard APP

Stay Informed

Connect your devices with the **eGuard** application: Ductless fume hoods, fume hoods equipped with the GreenFumeHood3 technology or filtration cabinets or any other Erlab appliances that can be connected. With a simple glance on your smartphone, you can remotely control the proper operation of your devices and the air quality in your laboratory. This is the assurance of enhanced security.
